## HOW CAN STRAIGHTENING BENEFIT ME?

If you have crooked, misaligned teeth, or an improper bite, you could eventually suffer from damaged teeth or strained and sore jaw muscles. In cases of very serious misalignment, this could result in the abnormal development of the shape of the face. In most cases, common dental problems can easily be solved by correcting any crowding of the teeth or by straightening them.

Your bite can also be corrected using orthodontic treatments so that your teeth meet evenly.

Ultimately, orthodontics can improve the way you eat and talk, but most of all can give you the confident smile you deserve.

## TYPES OF ORTHODONTIC TREATMENTS

We do discreet, clear braces (Invisalign®), wired braces (metal and ceramic), lingual braces, removable aligners, the whole range!

With such a wide selection of braces available to choose from, we will work with you to select the type of brace which suits you and your lifestyle. We want your teeth straightening journey with us to be as stress-free as possible. We want your straighter, brighter smile to be a part of a healthier, stronger mouth.

The purpose of any type of brace is to place gentle pressure on the teeth over a set period of time to move them into the correct position. The time taken to achieve the desired result depends on the severity of the problem.

**You can eat and drink normally whilst wearing a brace and it may be less noticeable than you'd think!**

**Call us today on 0161 494 8621**

and book a consultation appointment with our Specialist Dentist Dr Raphy. She is very experienced and has a wide selection of solutions to your straight smile issues!
